

Figure I: Infrared Spectrum of the Polymorph.

2/4

Figure II: Raman Spectrum of the Polymorph

Figure III: Solid-State NMR Spectrum of the Polymorph

Figure 1 is a line graph with the x-axis labeled 'Number of hauls' ranging from 1 to 10, and the y-axis labeled 'Percentage of total catch' ranging from 0 to 100. There are three data series represented by different symbols: solid circles (●), open circles (○), and solid squares (■). The first series (●) starts at approximately 10% for 1 haul and rises sharply to nearly 100% by the 10th haul. The second series (○) starts at approximately 10% for 1 haul and rises more gradually to about 80% by the 10th haul. The third series (■) starts at approximately 10% for 1 haul and rises very slowly to about 10% by the 10th haul.

Number of hauls	● (P. setiferus)	○ (P. setiferus + P. setiferus + P. setiferus)	■ (P. setiferus + P. setiferus + P. setiferus)
1	10	10	10
2	40	20	10
3	60	30	10
4	75	40	10
5	85	50	10
6	90	60	10
7	95	70	10
8	98	75	10
9	99	78	10
10	100	80	10
